SKILLS

Programming Languages: C#, JavaScript, SQL, Dart

Frontend & Mobile: React.js, Next.js, Flutter (BLoC), Progressive Web Apps (PWA)

Backend: C# .NET Core, .NET 8/10

Databases & Cloud Infrastructure: SQL Server, Microsoft Azure

Development Tools: Git / Github, Postman, Android Studio

Design & 3D Modeling: Autodesk Fusion, FreeCAD, Blender, SketchUp, Adobe Creative Cloud (Illustrator, Photoshop, Premiere Pro, After Effects)

EDUCATION

Khonkaen University

Bachelor of Fine and Applied Arts Program in Visual Communication Design | Cumulative GPA: 3.38/4.00 (Second Class Honors)

EXPERIENCE

Software Developer

Auto Motion Works (Khonkaen, TH)

February 2023 - Present

Delivered full-stack lifecycle ownership from database design to production deployment, maintaining multiple company web applications for over 3 years alongside dedicated cross-platform mobile development

Accomplishments:

- Took primary responsibility for the Flutter cross-platform mobile app, independently developing ~90% of core features and managing V.1 production releases on Google Play Console (.aab).
- Built a mobile case-chat system using SignalR for real-time messages and file uploads, and integrated local notifications using flutter_local_notifications.
- Engineered a full-stack Preventive Maintenance (PM) module using React.js and C#, featuring dynamic master-detail grids for machine contract assignments and Base64 file processing for onsite evidence uploads.
- Replaced a legacy hardcoded permission structure with a database-driven Dynamic Role-Based Access Control (RBAC) system returning dynamic claims for frontend UI rendering.
- Implemented Progressive Web App (PWA) features using Service Workers for offline onsite tracking and integrated VAPID Web Push notifications.
- Normalized inconsistent data from legacy ERP imports by designing a variant mapping table to match and convert string discrepancies into correct SQL Server relational IDs.
- Refactored Excel file uploads to parse spreadsheet data client-side in React, sending clean JSON payloads to prevent server memory spikes.
- Developed an HR employee evaluation tool in React and C#, utilizing bulk JSON parsing inside SQL Server to process array data in single queries.
- Upgraded the communication module for the Internal Delegate system using Node.js and Socket.IO, building a two-channel notification router to deliver Socket.IO alerts to online users or Web Push to offline users.
- Designed the exterior visual frame and 3D concept renders of the Shuttle Car using Blender and Autodesk Fusion, producing simulation animations for stakeholder presentations.

InvestPlanner (Value Investing & Portfolio PWA):

[Front End] github.com/treetasetp42/PlanningPort-FrontEnd [Back End] github.com/treetasetp42/3TaC8-PlanningPort

- Developed a full-stack web application for personal transaction tracking and portfolio risk management.
- Integrated financial calculators based on Discounted Cash Flow (DCF) models to estimate intrinsic stock values.
- Integrated an AI Chatbot assistant using Third-Party APIs to automate user onboarding and provide real-time operational guidance.
- Deployed backend API and SQL Server on an Ubuntu VPS using Docker Compose, configured with a reverse proxy.
